TEACHWELL THERAPY SERVICES

Applied Behavior Analysis helps students, families and educators develop behaviors that lead to successful learning. We make ABA therapy accessible by offering comprehensive school-based services, day school programming and center-based therapy. Our team of behavior analysts and professional staff focus on the needs of each learner to create lasting behavior change.

THE BASICS OF APPLIED BEHAVIOR ANALYSIS

RESEARCH-BASED

Applied Behavior Analysis is a widelyrecognized treatment for autism and other communication or behavior challanges that impact learning.

DATA-DRIVEN

Highly trained staff gather feedback on behavior plans and on-on-one therapy to optimize learning and better inform teaching.

MEASURABLE

Behavior analysts observe students and their learning environment to create individual plans that lead to measurable changes in learning.

SOCIALLY MEANINGFUL

Behavior analysts work to ensure behavior changes improve classroom learning and can be applied in a broad range of life situations.

Teachwell Therapy Services support child development and student learning. We work with educators and families to implement plans and update goals when student needs change. Our team of certified professionals offers therapy in-person or using remote learning platforms.

EXPANDING ACCESS TO A PROVEN THERAPY

Applied Behavior Analysis therapy is delivered by licensed professionals trained to apply the science of behavior change to the learning process. Students with autism, advanced communication disorders or a history of behavioral challenges receive individualized support and work through a detailed plan to learn new behaviors. Our services are designed to make ABA therapy accessible and affordable.

Board Certified Behavior Analysts travel to schools across Southeast South Dakota to ensure students can benefit from applied behavior analysis strategies and therapy. Our team conducts functional behavior assessments and leads the development of behavior improvement plans. We also consult with individual educators on specific cases, classroom-level management strategies or schoolwide behavior programs.

Teachwell improves access to applied behavior analysis through professional development and technician training programs. Professional development provides teachers with essential understanding and practical advice. Our registered behavior technician (RBT) training program builds a school's capacity to implement and monitor improvement plans by supporting existing staff throughout the professional certification process.

Our specialists provide applied behavior analysis programming and services at our Teachwell Solutions facility in Sioux Falls. We offer Teachwell Prosper School, a day school program that serves students who learn and think differently, including children with autism or other communication and behavior challenges. Our team of behavior analysts and technicians also provide evaluations and individual or group therapy.
